Mr. Christopher Kirkpatrick  
Commodity Futures Trading Commission  
1155 21<sup>st</sup> Street NW  
Three Lafayette Centre  
Washington, DC 20581

**RE: LCH Limited Submission Related to Mandatory Clearing Determination – SARON Overnight Index Swaps**

Dear Mr. Kirkpatrick:

LCH Limited (“LCH”), a derivatives clearing organization (“DCO”) registered with the Commodity Futures Trading Commission (“CFTC”), is submitting (pursuant to CFTC regulation §39.5(b)) Swiss Franc (“CHF”) denominated Overnight Index Swaps (“OIS”) referencing the market standard Swiss Average Rate Overnight (“SARON”) index (“Submitted Swaps”) for a determination of whether mandatory clearing should apply.

***§39.5 Review of swaps for Commission determination on clearing requirement.***

***(b) Swap submissions.***

***(2) A derivatives clearing organization shall submit swaps to the Commission, to the extent reasonable and practicable to do so, by group, category, type, or class of swaps.***

LCH currently clears the Submitted Swaps to a maximum eligibility of 31 years. The below table identifies the characteristics of the Submitted Swaps; specifically the instrument type, currency, legs of the swap, whether variable notional applies, maximum tenor, and notional amount.<sup>1</sup>

Instrument	Currency	Leg 1	Leg 2	Variable Notional	Maximum Tenor	Notional Amount (USD)
OIS	CHF	Fixed	CHF-SARON-OIS-COMPOUND	Yes	11,375 days	0.01-99,999,999,999.99
OIS	CHF	Fixed	CHF-SARON-OIS Compound	Yes	11,375 days	0.01-99,999,999,999.99

**§39.5(b)(3)(i) Statement of Eligibility**

A statement that the DCO is eligible to accept the swap, or group, category, type, or class of swaps for clearing and describes the extent to which, if the CFTC were to determine that the swap, or

<sup>1</sup> All SwapClear contracts are governed by the 2021 ISDA interest rate derivatives definitions (“2021 Definitions”). However, to accommodate member systems, LCH makes swaps referencing floating rate options defined under the 2006 ISDA definitions eligible for clearing. When the swap is cleared, LCH applies the equivalent floating rate option under the 2021 Definitions.

**group, category, type, or class of swaps is required to be cleared, the DCO will be able to maintain compliance with section 5b(c)(2) of the Act.**

LCH is eligible to accept the Submitted Swaps for clearing and able to clear the Submitted Swaps in compliance with Section 5b(c)(2) of the United States Commodity Exchange Act (“Act”), including if the CFTC were to determine that the Submitted Swaps are required to be cleared. LCH has a well-developed rule framework and support infrastructure for clearing interest rates swaps. LCH has leveraged this existing operational capability to offer the clearing of the Submitted Swaps. When LCH launched these products, LCH performed testing to ensure it is able to clear the Submitted Swaps in a manner which is consistent with the terms on which they are traded.

Further to this, LCH notified its clearing members of a number of minor changes to the procedure documents which were made in order to support the clearing of the Submitted Swaps in the above mentioned tenors. The procedural changes have been certified with the CFTC and are available on the LCH website.

### **§39.5(b)(3)(ii) Information Related to the Act’s Swap Submission Review Requirements**

**A statement that includes, but is not limited to, information that will assist the Commission in making a quantitative and qualitative assessment of the following factors:**

**(A) The existence of significant outstanding notional exposures, trading liquidity, and adequate pricing data.**

SARON is published by the SIX Group and has been available since 2009. LCH extended its clearing eligibility to SARON based swaps in October 2017. As of As of 9 December 2021, daily volume is c. CHF 9bn.

LCH publishes weekly and monthly volume and outstanding notional data. Market data is available from a number of brokers with quotes available to at least 30y, and 50y in some cases.

Please see:

Exhibit 1 – LCH Volumes (<https://www.lch.com/services/swapclear/volumes>).

Confidential Exhibit 2 – LCH Ltd – SARON Volume

**(B) The availability of rule framework, capacity, operational expertise and resources, and credit support infrastructure to clear the contract on terms that are consistent with the material terms and trading conventions on which the contract is then traded.**

LCH has a well-developed rule framework and support infrastructure for clearing interest rates swaps. LCH has leveraged this existing operational capability to offer clearing for the Submitted Swaps.

**(C) The effect on the mitigation of systemic risk, taking into account the size of the market for such contract and the resources of the derivatives clearing organization available to clear the contract.**

Central counterparty clearing of a product brings a number of well-established benefits to the market in that product, including to its oversight. Clearing imposes rigorous risk-management on all counterparties, including the collection of initial margin and the exchange of variation margin; it promotes standardization at all stages of trade management, which feeds back into improved

market liquidity; and it introduces transparency, enabling more efficient market surveillance and monitoring of potential systemic risks.

The Submitted Swaps have not introduced any new or novel risks to the SwapClear service, and the policies, procedures and operational aspects of the service remain unchanged.

As is the case for all cleared products, it is the view of LCH that clearing the Submitted Swaps is beneficial from a systemic risk perspective. Clearing avoids complex bilateral relationships and provides for default management of a failed institution to be handled centrally by the CCP. Additionally, since trades are centrally held by LCH, any implementation of fallbacks would be conducted under a single rule book, with LCH being the determining party. Furthermore, LCH provides a centralized view of risk for its cleared products and makes the visibility of risk positions more transparent.

**(D) The effect on competition, including appropriate fees and charges applied to clearing.**

LCH does not believe the clearing of the Submitted Swaps will have any negative impact on competition. Other CCPs are also clearing SARON-based swaps.

LCH's fees and charges for the above product are in line with those charged for existing SwapClear contracts. Please see Exhibit 3 – LCH Fees (<https://www.lch.com/services/swapclear/fees>).

**(E) The existence of reasonable legal certainty in the event of the insolvency of the relevant derivatives clearing organization or one or more of its clearing members with regard to the treatment of customer and swap counterparty positions, funds, and property.**

LCH believes that there is reasonable legal certainty in the event of the insolvency of LCH or a clearing member with regard to the treatment of house and customer positions, funds and property in connection with the clearing of the Submitted Swaps. The level of legal certainty around the clearing of Submitted Swaps is in all material respects the same as that of the products already cleared in the LCH SwapClear service.

LCH's Default Rules, contained in its Rulebook, set out that it is entitled to place a clearing member in default if it appears to LCH that the clearing member is unable, or is likely to become unable, to meet its obligations in respect of one or more contracts. The Default Rules set out the steps that LCH may take in respect of a defaulter, including entering into contracts to hedge market risk, selling any security, porting customer accounts of that clearing member to another clearing member, auctioning the defaulter's proprietary portfolio to other clearing members (to include any customer accounts of that clearing member which could not be ported to another clearing member), otherwise closing out any open contracts, and generally taking such action as LCH may deem necessary for its protection. The sequence of actions will be determined by a number of factors, including size and characteristics of the defaulted clearing member's portfolio and the market environment. Please see Exhibit 4 – LCH Rules (<https://www.lch.com/resources/rulebooks/lch-limited>).

Insofar as legal certainty in the event of the insolvency of the DCO is concerned, LCH would be wound up under English law.

### **§39.5(b)(3)(iii) Product Specifications**

**Product specifications, including copies of any standardized legal documentation, generally accepted contract terms, standard practices for managing any life cycle events associated with the swap, and the extent to which the swap is electronically confirmable.**

Product terms for the Submitted Swaps are market standard, follow 2021 ISDA Definitions<sup>2</sup> and are also part of the Financial products Markup Language (FpML) standard,<sup>3</sup> which is a protocol for sharing information on derivatives and other products. The Floating Rate Option for SARON under the 2021 ISDA definitions is CHF-SARON-OIS- Compound.

The Product Specific Contract Terms can be found in the LCH Product Contracts Terms and Eligibility Criteria Manual. Please see Exhibit 4 – LCH Rules (<https://www.lch.com/resources/rulebooks/lch-limited>) which includes links to the Product Specific Contract Terms and Eligibility Criteria Manuals although they are not part of the rulebook.

### **§39.5(b)(3)(iv) Participant Eligibility**

**Participant eligibility standards, if different from the derivatives clearing organization's general participant eligibility standards.**

The participant eligibility standards for the Submitted Swaps are the same as those for existing SwapClear clearing members.

### **§39.5(b)(3)(v) Price Discovery**

**Pricing sources, models, and procedures, demonstrating an ability to obtain sufficient price data to measure credit exposures in a timely and accurate manner, including any agreements with clearing members to provide price data and copies of executed agreements with third-party price vendors, and information about any price reference index used, such as the name of the index, the source that calculates it, the methodology used to calculate the price reference index and how often it is calculated, and when and where it is published publicly.**

[LCH currently uses one inter-dealer broker (“IDB”) quote and one non-IDB quote for SARON along the curve.]

<sup>3</sup> <http://www.fpml.org/coding-scheme/floating-rate-index> published on 21st December 2017

**§39.5(b)(3)(vi) Risk Management**

**Risk management procedures, including measurement and monitoring of credit exposures, initial and variation margin methodology, methodologies for stress testing and back testing, settlement procedures, and default management procedures.**

The clearing of the Submitted Swaps has been entirely accommodated within the existing LCH framework for measurement and management of risk and for the process of default management. The introduction of a clearing mandate for the Submitted Swaps would not necessitate any change to these processes.

Please see:

Confidential Exhibit 9 – SwapClear & Listed Rates Risk Management Framework

Confidential Exhibit 10 – Default Management Policy

**§39.5(b)(3)(vii) Applicable Rules, Manuals, Policies, or Procedures**

Please see Exhibit 4 – LCH Rules (<https://www.lch.com/resources/rulebooks/lch-limited>).

**§39.5(b)(3)(viii) Communications to Members Regarding this Submission**

**A description of the manner in which the derivatives clearing organization has provided notice of the submission to its members and a summary of any views on the submission expressed by the members (a copy of the notice to members shall be included with the submission).**

LCH engages its clearing members in the design and testing of new products at an early stage, through regular meetings and working groups. Prior to clearing the Submitted Swaps, clearing members were notified of required Rulebook changes.

Notice of this submission under CFTC regulation §39.5(b) was given to SwapClear clearing members on 1 September 2017. Please see Exhibit 11 - SARON linked OIS Submission for Determination of Clearing Requirements. No material feedback was received. Furthermore, this submission related to a mandatory clearing determination is publicly available.<sup>4</sup>

LCH launched the Submitted Swaps for clearing member and customer clearing on 16 October 2017. Since that time, the market has been supportive of the Submitted Swaps and volumes have increased over time. CHF LIBOR has ceased publication at the end of 2021. As determined by the Swiss Rates Working Group, SARON is the risk free rate for the CHF market. LCH converted all CHF LIBOR swaps to SARON over the weekend of December 4, 2021, with only LIBORs fixing in 2021 remaining.

As of December 22, 2021, 72 clearing members and 507 customers have open interest in the Submitted Swaps.

Please see Confidential Exhibit 2 – LCH Ltd – SARON Volume.
